Instructions for filling the sheet:
- Don't fold the sheet. Use only ball pen. Read the given paragraph carefully.
- Below the paragraph, you will find questions with blanks.
- Use the Answer Bank provided to fill in the blanks with the most appropriate word(s).
- Each word/phrase from the Answer Bank can be used only once, unless stated otherwise.
- Write only the correct word(s) in the blank space provided.
- Spelling errors may result in the loss of marks.
- Do not use words that are not in the Answer Bank.
- **Only use *UPPER CASE CAPITAL LETTER ALPHABETS* in the boxes.**

Paragraph: Carbon compounds undergo addition reactions when they react with unsaturated molecules, such as alkynes or alkenes. These reactions involve the addition of a functional group to the carbon chain, which can lead to the formation of new bonds and altered chemical properties. For example, the reaction between ethene and chlorine gas forms chloroethene through an addition process.

Answer bank: ALKENES, CHLORINE, UNSATURATED, FUNCTIONAL, REACTIONS, CARBON, CHAIN, FORMED

Q1. Carbon compounds undergo addition reactions when they react with unsaturated molecules, such as alkynes or _____.

Q2. These reactions involve the addition of a group to the carbon .

Q3. For example, the reaction between ethene and _____ gas forms chloroethene through an addition process.

Q4. The reaction between ethene and _____ gas forms chloroethene through an addition process.

Q5. Carbon compounds undergo addition reactions when they react with unsaturated molecules, such as ____ or alkenes.

Q6. These reactions involve the formation of new and altered chemical properties.

Q7. For example, the reaction between _____ and chlorine gas forms chloroethene through an addition process.

Q8. The reaction between _____ and chlorine gas forms chloroethene through an addition process.

Q9. Carbon compounds undergo addition reactions when they react with unsaturated molecules, such as alkynes or ____.
