Worksheet & Answer Key

Ethanols physical properties include being a liquid at room temperature, having a density slightly higher than water, and exhibiting some solubility in water. Its melting point is relatively low, ranging from 129 to 153 degrees Celsius. Furthermore, ethanol has a characteristic sweet odor, which contributes to its use as a solvent in various industries. Additionally, it can be used as a fuel source due to its energy density and combustion properties.

Word Bank:

solvent, density, odor, melting, fuel, room, degrees, characteristic

Fill in the blanks:

1. Ethanols physical properties include being a liquid at _____ temperature, having a density slightly higher than water, and exhibiting some solubility in water.

2. Ethanols melting point is relatively low, ranging from _____ to 153 degrees Celsius.

3. Furthermore, ethanol has a _____ sweet odor, which contributes to its use as a _____ in various industries.

4. Additionally, it can be used as a _____ source due to its energy density and combustion properties.

5. Ethanols physical properties include being a liquid at _____ temperature, having a _____ slightly higher than water, and exhibiting some solubility in water.

6. Ethanols melting point is relatively low, ranging from 129 to _____ degrees Celsius.

7. Furthestmore, ethanol has a _____ sweet odor, which contributes to its use as a _____ in various industries.

8. Furthermore, ethanol has a _____ sweet odor, which contributes to its use as a _____ in various industries.

9. Ethanols melting point is relatively low, ranging from 129 to 153 degrees _____.

■ Answer Key (for teachers only):

1. room
2. density
3. characteristic
4. melting
5. fuel
6. room
7. degrees
8. sweet
