Worksheet & Answer Key

Ethanolic acid, also known as acetic acid or vinegar, is a colourless liquid with _____ solubility in water. It has a distinctive pungent smell and is commonly found naturally in fermented foods such as yogurt and cheese. This acidic compound has a molecular formula of CH3COOH and a density of _____. Its boiling point is 118°C at standard pressure, making it easily vapourised. Ethanoic acid is a key component in the production of _____, a popular food preservative. It also serves as an important ingredient in many cosmetic products due to its antimicrobial properties.

Word Bank:

solubility, density, preservative, ingredient, colourless, pungent, molecular, component

Fill in the blanks:

1. Ethanolic acid has _____ solubility in water.

2. The density of ethanoic acid is _____.

3. This acidic compound is a key _____ in the production of parabens.

4. Ethanoic acid serves as an important _____ in many cosmetic products.

5. Its boiling point is 118°C at standard pressure, making it easily vapourised.

6. Ethanoic acid has a distinctive pungent smell and is commonly found naturally in fermented foods such as yogurt and cheese.

7. This acidic compound has a molecular formula of CH3COOH and a _____ of _____.

8. Ethanoic acid is a key component in the production of parabens, a popular food _____.

9. Ethanoic acid also serves as an important ingredient due to its antimicrobial _____.

■ Answer Key (for teachers only):

1. solubility
2. density
3. preservative
4. ingredient
5. colourless
6. pungent
7. molecular
8. component
