Worksheet & Answer Key

The movement of plants due to growth is an example of thigmotropism. This type of movement occurs when plants bend or curve in response to physical contact with their environment, such as light or surrounding objects. For instance, the stems of climbing plants will _____ towards a support to eventually wrap around it and grow upwards. Similarly, some plant leaves will _____ towards the direction of sunlight to maximize their exposure.

Word Bank:

thigmotropism, support, grow, direction, maximize, exposure, wrap, bend

Fill in the blanks:

1. Stems of climbing plants will _____ towards a support to eventually wrap around it and grow upwards.
2. Some plant leaves will _____ towards the direction of sunlight to maximize their exposure.
3. The movement of plants due to growth is an example of _____.
4. This type of movement occurs when plants _____ in response to physical contact with their environment.
5. Plants bend or curve in response to physical contact with their environment, such as light or surrounding _____.
6. Some leaves will grow upwards as they _____ towards a support.
7. Climbing plants will wrap around a _____ and eventually grow upwards.
8. Leaves maximize their exposure by _____ towards the direction of sunlight.

■ Answer Key (for teachers only):

1. grow
2. wrap
3. thigmotropism
4. bend
5. support
6. maximize
7. bend
8. grow
