Instructions for filling the sheet:

- Don't fold the sheet. Use only ball pen. Read the given paragraph carefully.
- Below the paragraph, you will find questions with blanks.
- Use the Answer Bank provided to fill in the blanks with the most appropriate word(s).
- Each word/phrase from the Answer Bank can be used only once, unless stated otherwise.
- Write only the correct word(s) in the blank space provided.
- Spelling errors may result in the loss of marks.
- Do not use words that are not in the Answer Bank.
- **Only use *UPPER CASE CAPITAL LETTER ALPHABETS* in the boxes.**

Paragraph: The resistance of an electrical conductor is influenced by several factors. The most significant one is the type of material, which can be described as _____ or insulating. For instance, copper is a good _____ while glass is a poor one. The length and cross-sectional area of the conductor also affect its resistance, with longer conductors having higher resistances due to increased _____. Temperature changes can cause the resistance to fluctuate, making it more _____ in cold conditions. Finally, impurities or defects in the material can lead to increased _____, making it less suitable for use.

Answer bank: INSULATING, GOOD, INCREASED, MORE, LESS, POOR, COPPER, GLASS

Q1. _ of an electrical conductor is influenced by several factors.

Q2. The most significant one is the type of material, which can be described as _ or insulating.

Q3. Copper is a good _ while glass is a poor one.

Q4. Longer conductors having higher resistances due to increased _.

Q5. Temperature changes can cause the resistance to fluctuate, making it more _ in cold conditions.

Q6. Impurities or defects in the material can lead to increased _, making it less suitable for use.
