Instructions for filling the sheet:
• Don't fold the sheet. Use only ball pen. Read the given paragraph carefully.
• Below the paragraph, you will find questions with blanks.
• Use the Answer Bank provided to fill in the blanks with the most appropriate word(s).
• Each word/phrase from the Answer Bank can be used only once, unless stated otherwise.
• Write only the correct word(s) in the blank space provided.
• Spelling errors may result in the loss of marks.
• Do not use words that are not in the Answer Bank.
Only use **UPPER CASE CAPITAL LETTER ALPHABETS** in the boxes.

Paragraph: In plants, transportation occurs through various mechanisms to distribute nutrients and waste products. Xylem tissue is responsible for moving water and minerals from the roots to the leaves via a process called transpiration. The phloem tissue transports sugars and other organic compounds produced by photosynthesis from the leaves to the rest of the plant. This movement of substances is crucial for growth, development, and survival.

Answer bank: TRANSPORT, MECHANISMS, TISSUE, PROCESS, TRANSPIRATION, PHLOEM, PHOTOSYNTHESIS, SURVIVAL

Q1... Plants transport nutrients and waste products through various _____.

Q2... The xylem tissue moves water and minerals from the roots to the leaves via a process called _____.

Q3... The phloem tissue transports sugars and other organic compounds produced by _____ from the leaves to the rest of the plant.

Q4... This movement of substances is crucial for _____, development, and survival.

Q5... Xylem tissue is responsible for moving water and minerals from the roots to the leaves via a process called _____.

Q6... The phloem tissue transports sugars and other organic compounds produced by photosynthesis from the leaves to the rest of the _____.

Q7... This movement of substances is crucial for growth, _____, and survival.

Q8... Plants use various mechanisms to distribute nutrients and waste products through their _____.
