Paragraph: Excretion in human beings is a vital process that involves the removal of waste products from the body. This process occurs in the kidneys, where _____ are filtered out of the blood and excreted as urine. The kidneys work closely with the liver to remove _____ and other waste products from the bloodstream. The urinary system then carries the waste products to the bladder for storage and eventual removal through urination. In addition to removing waste, excretion also helps regulate _____, which is important for maintaining overall health.

Answer bank: WASTE, BILE, FLUID

Q1.. Excretion in human beings is a vital process that involves the removal of
