Instructions for filling the sheet:

- Don't fold the sheet. Use only ball pen. Read the given paragraph carefully.
- Below the paragraph, you will find questions with blanks.
- Use the Answer Bank provided to fill in the blanks with the most appropriate word(s).
- Each word/phrase from the Answer Bank can be used only once, unless stated otherwise.
- Write only the correct word(s) in the blank space provided.
- Spelling errors may result in the loss of marks.
- Do not use words that are not in the Answer Bank.
- **Only use *UPPER CASE CAPITAL LETTER ALPHABETS* in the boxes.**

Paragraph: Spherical mirrors are used to produce a real, inverted image on a screen. The mirror formula and magnification are important concepts in understanding how these mirrors work. The mirror formula is given by _____, where R is the radius of curvature, f is the focal length, and p is the distance from the mirror to the object. This formula can be used to calculate the image distance, which is dependent on the object distance. The magnification of a spherical mirror depends on the ratio of the image height to the object height. When the object is placed within two F's, the image is real and inverted.

Answer bank: IMAGE, DEPENDENT, FORMULA, HEIGHT, OBJECT, DISTANCE, INVERTED, REAL

Q1. Spherical mirrors are used to produce a ___, inverted image on a screen.

Q2. The mirror formula is given by _____, where R is the radius of curvature, f is the focal length, and p is the distance from the mirror to the ___.

Q3. This formula can be used to calculate the ___, which is dependent on the object _.,

Q4. The magnification of a spherical mirror depends on the ratio of the ___ height to the ___ height.

Q5. When the ___ is placed within two F's, the image is ____ and inverted.
