Instructions for filling the sheet:

- Don't fold the sheet. Use only ball pen. Read the given paragraph carefully.
- Below the paragraph, you will find questions with blanks.
- Use the Answer Bank provided to fill in the blanks with the most appropriate word(s).
- Each word/phrase from the Answer Bank can be used only once, unless stated otherwise.
- Write only the correct word(s) in the blank space provided.
- Spelling errors may result in the loss of marks.
- Do not use words that are not in the Answer Bank.
- **Only use *UPPER CASE CAPITAL LETTER ALPHABETS* in the boxes.**

Paragraph: When light passes from one medium to another, it bends due to refraction. A lens can form an upright image or an inverted image depending on whether the object is placed closer or farther away. The shape and size of the lens affect the magnitude and direction of this bending, resulting in a formed image. Typically, concave lenses produce virtual images, while convex lenses create real images.

Answer bank: CONVEX, REFRACTION, LENSES, MEDIUM, INVERTED, UPRIGHT, CONCAVE, BENDS

Q1. The shape and size of the ___ affect the magnitude and direction of this bending, resulting in a formed image.

Q2. When light passes from one medium to another, it _ due to refraction.

Q3. A lens can form an _ image or an inverted image depending on whether the object is placed closer or farther away.

Q4. Typically, ___ lenses produce virtual images, while convex lenses create real images.

Q5. The ___ of a lens affect the magnitude and direction of this bending, resulting in a formed image.

Q6. A ___ lens can form an upright image or an inverted image depending on whether the object is placed closer or farther away.

Q7. When light passes from one medium to another, it bends due to _.

Q8. _ lenses create real images while concave lenses produce virtual images.
