Instructions for filling the sheet:

- Don't fold the sheet. Use only ball pen. Read the given paragraph carefully.
- Below the paragraph, you will find questions with blanks.
- Use the Answer Bank provided to fill in the blanks with the most appropriate word(s).
- Each word/phrase from the Answer Bank can be used only once, unless stated otherwise.
- Write only the correct word(s) in the blank space provided.
- Spelling errors may result in the loss of marks.
- Do not use words that are not in the Answer Bank.
- **Only use *UPPER CASE CAPITAL LETTER ALPHABETS* in the boxes.**

Paragraph: When white light passes through a glass prism, it is refracted, or bent, due to differences in speed between its component colours. This phenomenon is known as dispersion, where shorter wavelengths like violet and blue are bent more than longer wavelengths like red and orange. The dispersed colours then spread out and form a band of colour, which we perceive as the visible spectrum. The glass prism acts as a splitter, separating the different wavelengths of white light into their individual colours.

Answer bank: PRISM, REFRACTED, COMPONENT, DISPERSION, WAVELENGTHS, VISIBLE, SPLITTER, INDIVISIBLE

Q1. When white light passes through a _, it is _ due to differences in speed between its _____ .

Q2. This phenomenon is known as _____, where shorter ____ like violet and blue are _ more than longer ____ like red and orange.

Q3. The dispersed colours then spread out and form a band of ____ _____.

Q4. The glass ____ ____ acts as a ____, separating the different _____ of white light into their individual _____.

Q5. _ wavelengths like violet and blue are bent more than longer ____ wavelengths like red and orange.

Q6. The visible ____ is what we perceive as the spread-out colours.

Q7. Differences in speed between its component _ cause the light to be _.

Q8. The glass prism separates the different _____ of white light into their individual _____.
